

- ／ Permanently increase process stability
- ／ Identify most common errors
- ／ Lower operating costs
- ／ Boost efficiency

THE
ERROR DETECTION
& ANALYSIS TOOL

FOR INTERNAL LOGISTICS AND PRODUCTION

Volker Single – CEO

+49 (0)7141 388 74 - 11 // single@prolog-automation.de

DESIGN CONCEPT

PRO.analytiX is a web-based **error detection** and **analysis tool** for use in all kinds of industrial systems.

The tool is used to **efficiently document** and **analyze** system errors and to derive **forward-looking actions** for addressing them.

The data is provided to all participants **in real time**.

BASIC FUNCTIONS

- ◆ Record systems errors via web browser
- ◆ Individualize error tables
- ◆ Avoid log reports

EXPANDED FUNCTIONS

- ◆ Data is analyzed according to defined categories
- ◆ Automatic reports at defined times for specific users
- ◆ Tool automatically defines main sources of errors and abnormalities in the system
- ◆ Increases system efficiency by identifying and clustering errors

WITH PRO.analytiX

- ◆ Error detection is integrated in the user interface
- ◆ Data goes directly to the cloud
- ◆ Errors are transparently disclosed

WITHOUT PRO.analytiX

- ◆ Errors are recorded by hand or in digital tables
- ◆ Data gets lost
- ◆ Traceability is not always possible

BENEFITS

- ◆ **Low error rates** when creating and maintaining data
- ◆ **Multi-User Client:** Multiple users can work in parallel
- ◆ Search errors using filter functions from the start of data recording onward
- ◆ Automatic error analysis and reporting
 - ▶ Know your system errors
- ◆ Historical error overview across the entire system with one click
 - ▶ Reduced effort
- ◆ Identification of vehicle and system problems
- ◆ Data is available on the platform in real time
- ◆ Expansions and additional functions are in development

DATA PROVISION

Your data is processed with end-to-end encryption, according to German standards, and available to you around the clock.

It is also possible to integrate the database using your existing infrastructure.
